10. The inhalation device according to claim 1, wherein the
adjusting means for adjusting the individual aerosol doses reads out the
individual patient parameters and/or aerosol parameters for the
inhalation from the provision means, evaluates them and, on the basis
5 thereof, adjusts the respiratory flow and the tidal volume of the
inhalation device.

11. Use of the inhalation device according to claim 1 for
medicinal agents that become effective topically in the respiratory
system or systemically.
